

SCIENCE OF COMPUTER PROGRAMMING
VOLUME 26, NUMBERS 1-3, MAY 1996

Abstracted/Index in: ACM Computing Reviews, Cambridge Scientific Abstracts, Computer Abstracts, Computer Literature Index, Engineering Index/Compendex, INSPEC Information Services, Mathematical Reviews, Zentralblatt für Mathematik.

Mathematics of Program Construction

Guest Editor: B. Möller

CONTENTS

<i>M. Sintzoff</i>	
Editorial	1
<i>B. Möller</i>	
Preface	3
<i>R. Backhouse</i>	
Mathematics of program construction	5
<i>W. Turski</i>	
I was a computer	11
 Calculational design	
<i>R.S. Bird</i>	
Functional algorithm design	15
<i>N. Shankar</i>	
Steps towards mechanizing program transformations using PVS	33
<i>K. Achatz and W. Schulte</i>	
Massive parallelization of divide-and-conquer algorithms over powerlists	59
<i>R.J.R. Back, A.J. Martin and K. Sere</i>	
Specifying the Caltech asynchronous microprocessor	79
<i>R. Berghammer and B. von Karger</i>	
Towards a design calculus for CSP	99
<i>M. Russling</i>	
Deriving a class of layer-oriented graph algorithms	117

Programming techniques

K.R. Apt

Arrays, bounded quantification and iteration in logic
and constraint logic programming

133

A. Kaldewaij and V.J. Dieussen

Leaf trees

149

Programming in type theory

T. Coquand

An algorithm for type-checking dependent types

167

J.-F. Monin

Exceptions considered harmless

179

Mathematical foundations

S. Curtis and G. Lowe

Proofs with graphs

197

H. Doornbos and R. Backhouse

Reductivity

217

M. Frappier, A. Mili and J. Desharnais

A relational calculus for program construction by parts

237

K. Stølen

Refinement principles supporting the transition from
asynchronous unbounded to synchronous communication

255

Author index of Volume 26

273
